

- We have created a new table with comments, where there is:  
-recipe\_id and the comment;
- Using the JOIN command of two tables, you can see the authors of the comments on the pages of each recipe.
- Now each recipe opens separately.  
Used:  
- recipe:id;  
- Gin(c.Query());
- On the pages of each recipe you can see the full data (title, photo, details, ingredients, author, comment and the name of the author of the comments)
