- Changed structures (made the structure MVC) (MODEL VIEW CONTROLLER)

- First we added the models and in the future we will add the view and the controller in the correct order

- We released in a separate package:
  - database
  - user
  - search
  - recipe

  (there was only one main.go file)

- We have changed our database. Category, pictures, cooking time, ingredients, etc. have been added to the new recipe table. They are needed for future filters.

- Added filtering by two categories, in the future they will filter in dropdown format.
